PROFESSIONAL SUMMARY

MCA candidate with hands-on experience designing robust Python/Django backend systems, scalable REST APIs, and data-driven management platforms. Proficient in Django, Django REST Framework (DRF), JWT Authentication, Relational Schema Design (MySQL/PostgreSQL), and complex transaction handling. Experienced in building multi-tenant business systems, integrating external public/market APIs, optimizing SQL query performance, and deploying containerized production environments. Seeking opportunities in Python Backend Development and Software Engineering.

ACHIEVEMENTS

- Secured **AIR 702** in NIMCET (National Level MCA Entrance Examination).

PROJECTS

AgroSmart AI – Smart Farming Operations & Financial Ledger Platform **(Live App)** | **GitHub** *Django 5, DRF, MySQL, SimpleJWT, Gunicorn, WhiteNoise, Linux*

- Architected a modular agriculture management platform using **Django 5** and **MySQL**, tracking field allocation, seasonal crop life-cycles, daily field operations, and automated profit calculations across 10+ relational models.
- Designed and deployed 15+ secure RESTful API endpoints using **Django REST Framework (DRF)** and **SimpleJWT**, enforcing role-based permissions, token rotation, and CORS policies for multi-client consumption.
- Engineered an automated financial calculation pipeline tracking operational costs (labour diary, irrigation, fertilizer) and sales receipts, reducing manual ledger reconciliation by 95%.
- Integrated official **APMC Mandi Price APIs** (data.gov.in) with background synchronization and implemented a rule-based eligibility evaluation engine for agricultural subsidy schemes.
- Configured production-grade asset delivery using **WhiteNoise**, enforced proxy SSL headers, and deployed the full-stack architecture on **Render** connected to a managed cloud database.

BusinessOS – Modular Enterprise Operations & Management Suite **(GitHub)** *Python, Django, DRF, PostgreSQL/MySQL, Docker, Redis, REST APIs*

- Built a modular, multi-tenant Business Operating System (**BusinessOS**) to centralize sales management, inventory tracking, CRM pipelines, and automated ledger accounting.
- Implemented token-based authentication and strict **Role-Based Access Control (RBAC)** across Admin, Manager, and Staff roles with multi-tenant data segregation.
- Engineered atomic database transactions (`select_for_update`) during order checkout and invoice generation to eliminate race conditions and zero out stock discrepancy errors.
- Designed high-throughput REST APIs using **Django REST Framework**, leveraging query optimization (`select_related`, `prefetch_related`) and database indexing to reduce database overhead by 40% and maintain sub-100ms response latencies.
- Containerized application services using **Docker** and automated asynchronous report generation and exports, delivering real-time revenue analytics.

EDUCATION

University of Hyderabad, India 2025 – 2027
Master of Computer Applications (MCA) – Pursuing

Dr. APJ Abdul Kalam University, India 2021 – 2024
Bachelor of Computer Applications (BCA)

SKILLS

- **Languages:** Python, C++, Java, C, SQL
- **Backend & APIs:** Django, Django REST Framework (DRF), JWT Authentication, RESTful API Design, FastAPI Basics
- **Frontend:** HTML5, CSS3, JavaScript, Bootstrap, Responsive UI Design
- **Databases:** MySQL, PostgreSQL, SQLite, Relational Schema Design, Query Optimization
- **Tools & DevOps:** Git, GitHub, Docker, Linux/Bash Scripting, Gunicorn, WhiteNoise, Render, VS Code, REST Client
- **Core Concepts:** Data Structures & Algorithms (DSA), OOP, DBMS, Operating Systems, Database Transactions, Concurrency

CERTIFICATIONS

- **Python Programming** – Coding Seekho
- **Deloitte Technology Job Simulation** – Forage
